TOTAL PIECES ORDERED			

The latest addition to the Atlas All-Scales Signal System line complements the current line of Modern Hooded signals by providing a signal mast configuration most commonly used by the prototype in situations where a section of track may be operated in both directions. Due to regulation changes in 1985, brought about by improvements in locomotive design and cab visibility, these bi-directional mast signals have been slowly replacing older above-track signal bridges in many places.

Features:

- Common signal and mast style currently in use across the US
- Three-color Safetrans hooded signal heads
- Finely detailed etched-metal platform and railings
- Integrated mini-plug connectors for seamless operation with the Atlas Universal Signal Control Boards and cables
- Common Anode wiring
