95751 PIKO Car of the Year 2021

Introducing the next step in digital decoder design: PIKO's evolutionary new XP 5.1

The innovative XP 5.1 SmartDecoder is the heart of the new Expert Plus BR 83.10 steam locomotive!

Thanks to state-of-the-art manufacturing technology, PIKO's XP 5.1 offers you completely new functions that were unavailable with previous decoders.

Enjoy prototypical train operation with the XP 5.1!

- **A first for HO scale:** The XP 5.1 automatically detects whether the locomotive is running alone or with a train. The load change is reflected in both the motor control and engine sound. If the locomotive is moving or on an uphill grade, the smoke generator will emit the maximum amount of steam. If the engine is running downhill or in idle, the generator will emit a shallow cloud of steam.
- **Integral wheel sensor** in combination with the new XP 5.1 decoder generates **synchronized steam chuff sound** for each revolution of the drive wheels.
- **Impressive slow speed operation** thanks to innovative power management. "Keep-alive" capacitors keep the locomotive running smoothly over switches and dirty track.
- **Generous memory capacity** for up to 8 minutes of sound.
- **The volume levels of individual sound functions** can be set **separately using** function keys. There is no need for complex CV programming!
- **Bi-directional decoder communication** allows the locomotive's sound to control the motor and function outputs. For example, the firebox will flicker at greater intensity when the "coal shoveling" function is activated. The sound can also slow the engine down or delay the start-up sequence when the locomotive accelerates from a stop.
- **Plug & Play:** The XP 5.1 registers automatically on any DCC system recognizing RailComPlus® or mfx® decoders.

Be inspired by the outstanding qualities of PIKO Expert Plus locomotives and the innovative XP 5.1 decoder!

Finally there is an operational HO scale model of the Deutsche Reichsbahn's BR 83.10.

The highly detailed PIKO BR 83.10 is the newest Premium Model in the Expert Plus line. Until this year, no manufacturer has attempted an HO model of this unique locomotive. PIKO's new model captures the prototype's dimensions and features numerous separately applied details like boiler piping, a bell, a whistle, and sand piping. The fine spoked wheels and intricate valve gear will impress the most discriminating modeler. Technically, the PIKO BR 83.10 is a state-of-the-art model that commands attention with (among other things) running gear lights, cab lighting, a flickering firebox, and digital couplers. The XP 5.1 load-sensing decoder automatically controls the amount of steam the smoke generator will produce, depending on the locomotive's operating state. If the locomotive is at a standstill, the generator will release a light cloud of steam. If the locomotive is starting from a stop or is charging uphill, the generator will put out the maximum amount of steam. Further information on the prototype can be found on page 85 in main catalog 2021.

55916 Steam loco / Sound BR 83.10 DR IV
55917  Steam loco / Sound BR 83.10 DR IV

The factory installed PIKO SmartDecoder 4.1 features the latest digital technology and operates in RailComPlus®, Motorola®, and Selectrix® DCC formats as well as mfx®-format AC systems. For sound-equipped Expert Plus models, the speaker is individually matched to the model. Typical locomotive sounds such as engine sound, horns, brake squeal, etc. are individually activated as are each model's headlights and taillights. Each SmartDecoder 4.1 features individual mapping for up to 44 functions.

PIKO Expert Plus Locomotives – innovative models for maximum model railroading fun

- Separately-applied grab irons and railings
- Automatic decoder recognition by RailComPlus® and Mfx-capable DCC systems
- "Keep-alive" capacitor for silky-smooth switching without unwanted current interruption
- Digitally-activated couplers in NEM coupler sockets
- Original sound in modern 12-bit quality
- Digitally-activated LED head/tail light changeover
- Powerful can motor with flywheels
- Smooth running characteristics
- High-quality speaker
- Clear view through cab interior

applies to all sets on
this double page

The set includes:

(applies to all sets on this page)

- 12 x 55412 Curve R2 422 mm (16.6 in.)
- 5 x 55401 Straight G231 mm (9.1 in.)
- 1 x 55406 Straight G231
with track power connector (9 in.)
- 1 x 55447 Socket for track power
- 1 x 55270 Connection clip
- 1 x 55499 PIKO HO rerailer
- 1 x Speed control
- 1 x Power supply unit (adapter 5.4 VA)

Floor space:

around 158 x 88 cm (6.2 ft x 3.4 ft.)

Minimum floor space assembly:

168 x 98 cm (6.6 ft. x 3.8 ft.)

FRANCONIA-THURINGIA-EXPRESS TRAINSET

PIKO

Since 2011, DB Regio Bayern has been operating the five regional lines of the FrankenThüringen-Express (FTX) network. With the addition of the line from Jena to Leipzig, FTX trains are now operating in Saxony and Saxony-Anhalt. They serve a total of 52 stations connecting 17 cities and 18 municipalities. The RE 49 runs every two hours on the Nuremberg – Sonneberg route. The lack of ETCS train control systems in the cab cars necessitates the use of locomotives on both ends of the trains. BR 193 "Vectron" electric locomotives are employed as power on these trains. The Vectrons are made by Siemens and reach a top speed of 160 km/h (99mph) with the double-decker sets. PIKO's HO FTX train set is based on the prototype, and, like its big brother, comes with two locomotives featuring different road numbers. Both Vectron locomotives wear prototypically-correct Railpool paint schemes. A 1st/2nd class bilevel car and a 2nd class bilevel car are also included. The locomotives feature directional LED headlights and taillights, heavy diecast zinc frames, elaborately printed graphics, can motors with flywheels, and PluX22 interfaces for easy conversion to digital operation. Both engines and cars feature NEM 362 close coupling mechanisms. The AC version of this set has a factory-installed mfx-compatible decoder.
