## PREMIER CATALOG - SPRING 2023

**GUARANTEED PRE-ORDER DUE DATE:  
WEDNESDAY JUNE 7<sup>TH</sup> 2023**

April 2023

Dear O Scale Model Railroader,

Welcome to the Spring 2023 Atlas O Premier Catalog. Catalogs such as this one are the basis of Atlas' distinctive "guaranteed" pre-order system. Before the Research & Development department gives the final go ahead for production, Atlas announces to its customers the products we are preparing to make. This announcement comes in the form of our Atlas Model (HO & N) and Atlas O Premier Catalogs that provide our customers with the opportunity to arrange a guaranteed pre-order if placed by the given deadline. If possible, Atlas will try to fill orders placed after a given deadline, but these cannot be guaranteed. Occasionally, we offer 'Limited Availability' products for which we have speculated on order quantities and therefore these orders cannot be guaranteed. Either way, its best to place orders as soon as possible for your best chances at acquiring a selected product.

This catalog includes opportunities to reserve select Guaranteed Pre-Order Premier Locomotives as well as Master & Premier rolling stock. Atlas O continues the expansion of the O locomotive line with offerings of the Premier SD-70MAC, as well as Premier E8 Locomotives with matching Streamlined Passenger Cars. All of these locomotive offerings will come equipped with MTH DCS, Proto-Sound 3.0!

This catalog also includes the release of several rolling stock models in the Master and Premier lines including: Rapid Discharge Hoppers, 3 & 6 Bay Cylindrical Hoppers, 17,600 Gallon Corn Syrup Tank Cars and more - with authentic prototypical paint schemes. We're also announcing new runs of 40' Stock Cars and 50'6" Box Cars in our Trainman line. Throughout the catalog, you'll notice Atlas Collectors' Series Limited Edition paint scheme offerings. These items will only be produced one time, so seize the opportunity to add these to your freight car roster while you can! Rounding out the announcements are new Sanding Towers featuring colorful railroad logos - a great trackside addition to your model railroad empire.

Last, but not least, this announcement brochure serves as a reminder to all our customers, of the extensive line of Atlas O track, accessories, trackside buildings, signal system and other structures that Atlas O has available on a day to day basis. Whether you're rehabilitating an existing layout, or building one from scratch, Atlas O customer service and sales representatives are ready to assist you in whatever way we can to make your layout a reality.

To remain updated on all Atlas O products and special announcements, sign up for the Atlas Insider Email at <https://shop.atlasrr.com>.

Happy Model Railroading,  
Drew Postle, Atlas Sales Manager

In 1992, GM's Electro-Motive Division (EMD) introduced the new SD70 Series of engines, which come in the standard direct-current (DC) and alternating-current (AC) models. One glance at the design of this engine reveals the enormous technological gains in railroading. The SD70 boasts a 32-bit 16MHz control microprocessor named the EM2000. This computer works with the Integrated Cab Electronics (ICE) system to collect, analyze, and display a range of accurate-to-the-second information, such as speed, amps, throttle position, air brake operation, and cab signals. All of this information is displayed on full-color liquid crystal displays that replace the gauges and indicators found on earlier diesels.

The 70 Series also employs the HTRC (high-traction three-axle radial) truck that reduces rolling resistance in curves and lateral loads and therefore reduces wear on wheels. EMD estimates this will increase wheel life by 20 percent. These innovations have led to brisk sales of both the SD70M (DC version) and SD70MAC (AC version).

"Metra" and "Metra Metropolitan Rail" are registered servicemarks of Metra.

## ATLAS O PREMIER E8 LOCOMOTIVE

**Product Info:** <https://shop.atlasrr.com/d-693-spring-2023-o-scale-catalog.aspx>

In the mid-1930's, as the Electro-Motive Division of General Motors was trying to interest railroads in diesel passenger power, there was a lot of experimentation in exterior design. Looking at EMD's worm-like yellow and brown Union Pacific M-10000, its gleaming stainless steel Burlington Zephyr, or the boxy, just-plain-ugly early Santa Fe units, it's apparent that here was a new function looking for its form. The first generation of road diesels found its form in 1937 when the initial E-units, built for the B&O, inaugurated the classic "covered wagon" cab unit design that would last for two decades on both freight and passenger diesels.

The earliest E-units were each virtually custom-made, with less than 20 units produced of models EA through E5. The prewar E6 was the first mass-produced passenger diesel and the last to sport the rakish, streamlined EMD nose so characteristic of the 1930s. After the war, the new E7 adopted the "bulldog" nose introduced earlier on the FT freight diesel. With the rollout of the E8 in 1949, the E-unit, America's most popular passenger diesel, reached its final visual form — just in time for the last hurrah of the American passenger train. With twin motors to ensure reliability and six-wheel trucks that rode like a Cadillac, the E8 was an engineer's dream. For hoggers who had not long ago worked in steam locomotives, the clean cab of an E-unit with its lofty, panoramic view of the road ahead was not hard to get used to.

### Features:

- Intricately Detailed, Durable ABS Body
- Die-Cast Truck Sides, Pilots and Fuel Tank
- Metal Chassis
- Metal Handrails and Horn
- Moveable Roof Fans
- Metal Body Side Grilles
- (2) Handpainted Engineer Cab Figures
- Authentic Paint Scheme
- Metal Wheels, Axles and Gears
- Lead Remote-Controlled Proto-Coupler
- Rear Non-Operating Metal Coupler
- O Scale Kadee-Compatible Coupler Mounting Pads
- Prototypical Rule 17 Lighting
- Directionally Controlled Constant Voltage LED Headlight
- Lighted LED Cab Interior Light
- Illuminated LED Number Boards
- Lighted LED Front Marker Lights
- (2) Precision Flywheel-Equipped Motors
- Operating ProtoSmoke Diesel Exhaust
- Equipped with Proto-Sound 3
- Locomotive Speed Control In Scale MPH Increments
- 1:48 Scale Proportions
- Equipped with Proto-Sound Unit Measures: 18" x 2 1/2" x 3 7/8"
- Operates On O-31 Curves

*Perfect match for our Premier Streamlined Passenger Cars  
featured on pages 12-17.*

The lightweight, streamlined passenger car was a product of the Great Depression. While the heavyweight steel cars built in the teens and 1920s were dependable and often luxurious, their dark colors and solid, battleship-like exteriors did little to lift the spirits at a time when the entire nation needed a pick-me-up. As noted railroad historian John H. White, Jr. put it in *The American Railroad Passenger Car*, "Some hope during these gloomy years was offered by a new design concept called streamlining. It presented a sleek, modern image of speed and innovation. What had been an obscure technical term in aerodynamics was made into a household word through an astute publicity campaign mounted by several railroad traffic departments. It succeeded in creating a general interest in railroading practically unknown since the opening of the first transcontinental line... According to *Railway Age*, 'For the first time in many years, the words 'sold out' re-entered the ticket clerk's vocabulary.'"

But as White notes, the real change in passenger car construction was in weight, not the streamlined appearance that was largely for show: "Weight, not air friction, was the chief obstacle to economic operation." Unlike the heavyweights, the lightweight cars that debuted in the mid-1930s featured sides and roofs that contributed to their structural strength, eliminating the need for the heavyweights' massive underframes. Trucks went from six wheels to four, non-revenue space was decreased by using a vestibule on only one end of the car, and lighter, stronger, more rust resistant steel alloys came into widespread use. A typical new lightweight could be 15-20 tons lighter than the heavyweight car it replaced.

The majority of lightweights were 80'-85' long, which scales out to about 21" in O gauge. Many O gauge modelers, however, find cars of this length impractical, as they require large curves and create long trains that can overwhelm a typical-sized layout. For those reasons, our Premier lightweights are about 70 scale feet in length — reproducing the look and feel of prototype streamliners in a model that will round O-42 curves with ease and look at home on most scale-detailed O gauge layouts.

#### Features:

- Intricately Detailed, Durable ABS Bodies
- Stamped Metal Floors
- Detailed Car Undercarriage
- Colorful, Attractive Paint Schemes
- Metal Wheels and Axles
- Die-Cast 4-Wheel Trucks
- Fast-Angle Wheel Sets
- Needle-Point Axles
- (2) Operating Die-Cast Metal Couplers
- O Scale Kadee-Compatible Coupler Mounting Pads
- Constant Voltage Overhead LED Interior Lighting
- End-of-Car Diaphragms
- Separate Metal Handrails
- Detailed Car Interiors
- Sliding Baggage Car Doors
- Detailed Brake Wheel
- 1:48 Scale Proportions
- Unit Measures: 19" x 2 7/16" x 3 1/2"
- Operates On O-42 Curves

The Rapid Discharge Hopper, designed for heavy, dense loads like sand, gravel, limestone, and other aggregates, was designed and built by the Ortner Freight Car Co. (Now part of the TrinityRail® group). Thanks to its steep 60-degree end sheets and Rapid Discharge hopper door system, the car unloads completely in less than 30 seconds without the need for a car shaker. An entire unit train of these cars can be unloaded in 30 to 60 minutes, whereas other unloading systems could take 4 hours or longer. The design has stood the test of time, as these cars are still in service on many railroads nationwide.

### Features:

The Association of American Railroads (AAR) developed a standard design for 50-ton and 70-ton twin offset open hopper cars starting in the late 1920s. The design was modified in the mid 1930s, and through 1960 over 127,000 cars had been built to AAR specifications. Eastern coal carriers amassed the largest fleets - however, the twin offset hopper design was not limited to coal service, with ore and aggregates also being hauled.

They could also be found operating in a wide range of services including unit coal trains, blocks of loaded cars destined to a large consignee, and even "loose" single cars headed to smaller customers.

**Features:**

- Intricately Detailed, Durable ABS Body
- Metal Wheels and Axles
- Die-Cast 4-Wheel Trucks
- Fast-Angle Wheel Sets
- Needle-Point Axles
- Removable coal load included
- (2) Operating Die-Cast Metal Couplers
- O Scale Kadee-Compatible Coupler Mounting Pads
- Detailed Brake Wheel
- Separate Metal Handrails
- 1:48 Scale Dimensions
- Unit Measures: 9 1/2" x 2 1/2" x 3"
- Operates On O-31 Curves

Introduced in 1961 by ACF® to haul sand, clay, salt, grain and bulk plastics, the Cylindrical Hopper was the first commercially successful tank-type covered hopper car design. A few of the more than 4,000 cars of this type built through 1966 can still be seen in service today across the United States.

**Features:**

- Accurate painting and lettering with true ¼" dimensions and details
- Spring die-cast 100-ton roller-bearing trucks with rotating bearing caps
- Opening hatches
- Realistic see through roof walks
- Separately-applied grab irons & brake detail
- Die-cast articulated couplers (3-rail)
- 3 Bay Minimum radius curve: 0-31 (3-rail)/6 Bay Minimum radius curve: 0-42 (3-rail)

The prototype for the 17,600 Gallon Corn Syrup Tank Car was built in large numbers by Trinity Industries between 1984 and 1998. Of the over 7,000 cars that were built, most are still in active service today. The cars followed a common bent-barrel tank design that helps the product drain and unload easier. These cars are jacketed and insulated, and have exterior coil pipes to heat the commodity to promote faster unloading. Midland food-grade butterfly unload valves and Midland exterior spring safety valves were common appliances used on these cars. The biggest variation in the car production was in the manway / top platform arrangement. Several arrangements were specified by large shippers; for example ADM, Cargill, Corn Products, GATX, MCP, and Staley to name a few. These tank cars are commonly used to transport varying grades of Corn Syrup, Liquid Sugar, and Molasses from processing facilities to bulk distribution centers and other end-users throughout the US and Canada. They are a very common sight on today's railroads, and they have been for two decades. This initial release features three of the most common manway/top platform arrangements as specified by ADM, Cargill, and Corn Products (among others).

### Features:

- Separately applied detail such as: train line hoses, coupler cut levers, brake rigging, bottom outlet valve & valve handle, & metal grab irons
- 100 ton roller bearing trucks with rotating bearing caps
- Accurate painting and printing
- Highly detailed body with prototypical jacket seams
- See-through walkway and platforms
- Overall length: 10 1/4"
- Minimum diameter curve (3-rail): 0-36
- Minimum radius curve (2-rail): 24"

Berwick Forge & Fabricating built over 23,000 freight cars in its nearly 20 years of existence in Berwick, Pennsylvania. Their designs were very successful and most of the cars are still in service today. While Berwick built virtually all modern types of freight cars, they are perhaps best known for their 50' and 60' box cars.

This Atlas O model replicates the interesting series of 60' high-capacity cars that were built by Berwick in the late 70s. These Hy-Cube cars feature centered double plug-doors and a waffle pattern on the car sides.

**Features:**

- Intricately-detailed ABS body
- Etched metal safety platforms
- Finely die-cast metal ladders and stirrups
- Highly-detailed die-cast underframe
- Accurate painting and lettering
- 100-ton roller-bearing trucks with rotating bearing caps
- Simulated paint overspray on roof
- Minimum diameter curve: 0-54 (3-Rail)
- Minimum radius curve: 36" (2-Rail)

<b>TOTAL PIECES ORDERED</b>					

During the heyday of rail transport, livestock was routinely shipped in complete trainloads to packing plants throughout the country. The typical stock car was based upon a 40' box car modified with open slat sides and possibly internal decking for the smaller breeds of animals. Designed primarily for transporting cows and pigs, original stock cars date back to the 1860's, and could carry up to 20,000 pounds of livestock. Their use became rare by the 1980's, due to humane, safety and cost concerns. This ATLAS O TRAINMAN® model is a typical reproduction of a once-common freight car style. Resplendent with eye-popping details and engineered for reliability and historical accuracy, this model is a must-have addition to any O Scale layout!

### Features:

- Separately applied roof walks, ladder, brake wheel & brake lines
- Accurate painting & lettering
- See-through roof walks
- Metal couplers and sprung die-cast trucks
- True scale dimensions with accurate details
- Weighted, detailed underframes
- 2-rail cars feature scale wheels and body mounted scale couplers

In 1974, ACF® built the first box car for Railbox, a subsidiary of the Trailer Train Company. They went on to produce 5,400 50' cars over the next six years, receiving large orders from Class I railroads, shortlines and box car leasing companies. This ATLAS O TRAINMAN® box car is a stunning replica, designed to enhance your layout and provide many hours of reliable operation.

**Features:**

- Prototypical non-terminating corrugated ends
- Diagonal paneled roof
- Single 10' YSD design sliding door
- Weighted, detailed underframes
- Separately-applied end ladders, brake wheels & end platforms
- True scale dimensions with accurate details
- Die-cast roller bearing trucks with rotating bearing caps
- Die-cast couplers
- Accurate painting and lettering
- 2-Rail cars feature scale wheels and body mounted scale couplers
- Minimum diameter curve: 0-31 (3-Rail)
- Minimum radius curve: 24" (2-Rail)

This all-metal O Scale trackside accessory is a great addition for any model railroad featuring steam or diesel motive power pulling long strings of cars. While the accessory doesn't operate, real-life locomotives needed added tractive effort to tackle grades or slippery track brought on by weather conditions.

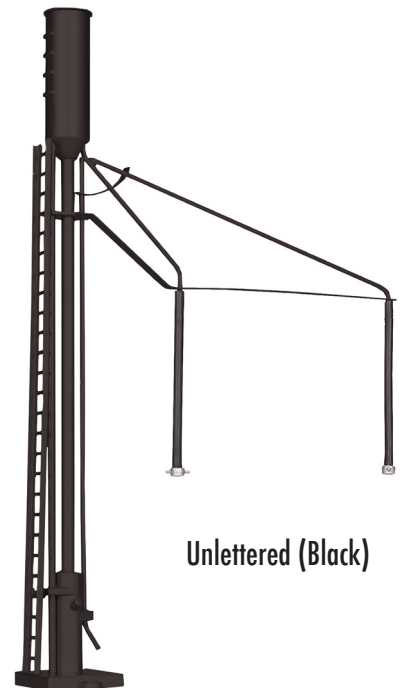

Locomotives sprayed sand down onto the rails directly in front of the drive wheels. The gritty texture provided increased traction and the sanding towers were conveniently located in areas where traction problems occurred and were just as important as the coal and water towers found throughout the railroads' lines during the steam era.

**Features:**

- All-Metal Construction
- Fully Assembled
- Fully Painted

Unlettered (Silver)

Unlettered (Black)

**ATLAS O TURNTABLE**

**AVAILABLE FROM YOUR LOCAL HOBBY SHOP OR SHOP.ATLASRR.COM**

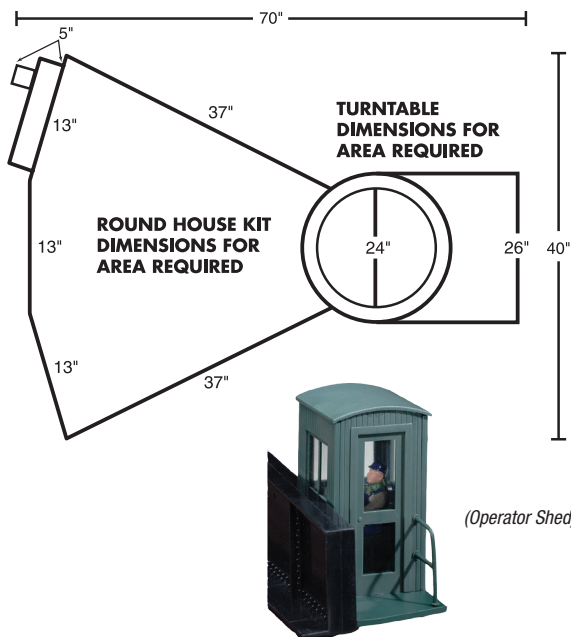

**Product Info:** <https://shop.atlasrr.com/p-53322-o-scale-turntable.aspx>

**O TURNTABLE** - In the steam era, many railroads used turntables to turn locomotives for their next journey. Railroads still use turntables to assist in the maintenance of diesel locomotives and rolling stock. Based on a Santa Fe prototype, Atlas O has realistically duplicated its above ground details, so adding a working turntable has never been simpler. What's more, everything is included for easy tabletop installation.

**FEATURES:**

- New - larger and more powerful motor
- New - flat cogged anti-slip belt
- New - deck support with more roller bearings for greater support of heavier locomotives
- New - redesigned metal contacts to power the rotating track
- Drive assembly is hidden under the utility shed
- Table diameter: 24"
- Proven Geneva-gearing for positive indexing
- Can be used for both 3 rail and 2 rail operation
- Will run on AC or DC power
- Compatible w/ TMCC & DCS (using TMCC or DCS accessory interface)
- Compatible with DCC (using a stationary decoder)
- Molded in appropriate colors
- Complete hook-up instructions
- Easy tabletop installation
- Motor Drive included in box for smooth and easy operation

ATLAS O SCALE TRACK & ACCESSORIES  
AVAILABLE FROM YOUR LOCAL HOBBY SHOP OR SHOP.ATLASRR.COM

Product Info: <https://shop.atlasrr.com>

Atlas is proud to offer a wide variety of track in both 2- and 3-Rail. Our track is time-tested and modeler approved and is crafted to be the MVP of your layout.

**Modeled for Realism:** The scale-sized plastic ties have a realistic wood grain, the tie plates have spikes, the rail joiners have authentic bolt detail and the center rail is blackened.

**Versatility:** Every track piece has been specially engineered to fit precisely together in an infinite variety of combinations without the need for custom cutting and fitting.

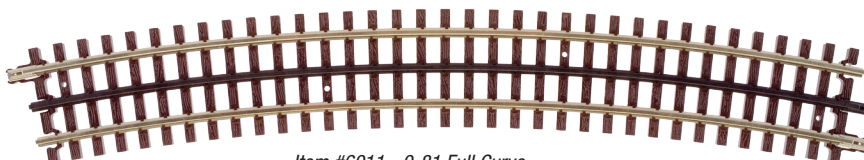

**Performance:** We chose a SOLID nickel silver T-rail for extra stability and superior electrical conductivity. In addition, the wide, flat surface of the rails provides far greater wheel/rail contact and better traction than tubular track. What's more, solid rails absorb sound better than tubular track so you can enjoy the sounds of your locomotive.

**3-RAIL FEATURES:**

- SOLID nickel silver rail for realistic shape, sounds and rust prevention
- Super joiners for tight fit and superior electrical connection
- Large and growing list of track: 10 different diameters (O-27- O-108), 16 different switches, 6 crossings, all the straight pieces you could ever want, flex track and more!
- Geometrically exact layout construction
- UV compatible: great for both indoor and outdoor use

Item #6094 - Track Screws

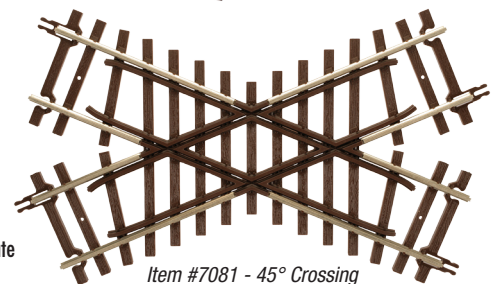

Item #6011 - 0-81 Full Curve

**2-RAIL FEATURES:**

- Code 148 Solid Nickel Silver Rail
- American prototype ties and tie spacing with correct spike, and tie plate and bolt details
- Dark brown tie strip
- Turnouts feature highly detailed metal insulated frogs and points
- Metal frog can be powered if desired
- UV compatible: great for both indoor and outdoor use
