GE Evolution Series "Tier 4" Locomotives

MSRP:
\$229.95 DCC
\$319.95 with sound

The InterMountain Tier 4 GEVO continues our tradition of excellence in this series of modern, GE-built locomotives. These models feature finely molded parts and railroad specific details, accurate paint and lettering with laser sharp printing and a smooth, powerful drive mechanism. These locomotives are factory equipped with ESU® sound decoders or ESU® non-sound decoders; a DC plug option will be available upon request.

Navajo Mine Railroad

Located 25 miles west of Farmington, New Mexico, serving the Four Corners Power Plant, two trains operate with roughly 18-21 cars making 12 trips to the plant each day. This railroad has made the transition from electric to ET44AC Tier 4 GEVO motive power in 2017, concluding the electric operation that was inaugurated in 1984. Navajo Mine Railroad is a unique and interesting mining operation; it does not have a direct rail connection with other railroads. It is isolated from national system. The shorter 18-21 car trains mean modeling this operation can be more easily accomplished in scale. InterMountain introduces the GE ET44AC in Navajo Mine Railroad #2026 and #2027. Both locomotives are former GE demonstrator from the same road numbers. Locomotives feature dual intake grilles behind the cab, early square exhaust stack and antenna dome on cab roof per prototype configuration.

Kansas City Southern

Refined their route to being the shortest connection between the Midwest, the Gulf of Mexico and a gateway to Mexico. In 2017 KCS responded to increased traffic with their first order to GE for ET44AC Tier 4 GEVOs. In early 2019 the first delivery of 25 units (5000-5024) began to arrive. These new locomotives sport KCS's iconic "Southern Belle" paint scheme and were immediately placed into regular service. ET44AC diesels are commonly seen on modern freights, even as the CP/KCS merger looms. InterMountain delivers this new version, with eight road numbers, featuring railroad specific detail. This includes Type 2 PTC Antenna Array on the cab roof, triple intake grilles behind the cab, and modified exhaust stack with angled sides for increased clearance per prototype.
