STARTER SETS & LOCOMOTIVES

Dear PIKO G-Scale Friends,

We can enjoy looking back together at a successful Jubilee year in 2024, celebrating the 75th anniversary of PIKO. And the PIKO “Tag der Offenen Tür” or Open House Day on June 22nd was a fantastic event. Around 14,000 people made the trek to the region of Thüringen, to gather in the PIKO hometown of Sonneberg. Many fortunate visitors enjoyed the chance to ride one of several special chartered trains through the gently rolling hills to event.

The PIKO factory and headquarters put on a great show for all. Visitors could wander through the sprawling factory complex and see PIKO products being made. Many aimed straight for the kids’ play area with operating trains, or the beautiful modular model train layouts set up by several clubs. And there was plenty of delicious local food and drink for all. It’s not too early to make plans for the next bi-annual event in summer 2026!

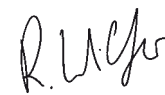

We also look forward to another great year in 2025, bringing the wishes of many PIKO fans to realization. The recently-delivered German BR 91.3 steam loco delivers beautiful details and refinement in a size to fit on any G-Scale layout. 2025 will see the arrival of an absolute “cult classic” with the legendary V200.1 (later BR 221) diesel of the German Federal Railways.

Fans of American trains will see three new versions of compact and economical steam locos, as well as a number of new freight and passenger car variations. And, as has come to be a tradition with PIKO, the latter part of the year will bring a number of surprises. This year marks the 15th anniversary of the founding of PIKO America, providing reliable availability and support for the entire PIKO product line all across North America. We have developed not only hundreds of new products over those years, but also many new and popular technological advancements to enhance your G- Scale and garden railroading fun. This year will be no exception!

The past couple years have also seen the delivery of exciting new American trains in HO- and N-Scale. We’ve had the pleasure of making many new friends in these smaller scales. Whatever scales of trains interest you, we certainly love to hear from you. Be sure to stay tuned to the news on our website www.piko-america.com and our social media channels. On behalf of the hundreds of PIKO workers around the world, we wish you “Viel Spaß!” Lots of fun with your PIKO trains!

CAD Drawing

37860 VTG VI Chemical Tank Car

Prototype and Model:

Equipped for transporting a wide variety of chemicals, the chemical tank car and its stainless steel (V4A) tank is an indispensable and modern transportation method for many companies in the chemical industry. These cars are designed to safely carry a wide variety of substances, partly through insulation and partly through heating. With a volume of 72 m³ and a tare weight of 24.5 t, a maximum of 65.5 t can be loaded. The tank's 1.5% incline ensures good drainage for full emptying of residual quantities.

37460 DB IV BR 221 Diesel Loco (Non-Sound)

37461 DB IV BR 221 Diesel Loco, Sound

Prototype and Model:

Although the V200.0 locomotives proved to be very successful, increased traffic volume by the end of the 1950s made it necessary for the Deutsche Bundesbahn to develop the series with more powerful locos. In 1960, Krauss-Maffei was awarded the contract to develop and build the V200.1, which, in addition to more powerful drive motors, featured a roof and front end redesigned from its predecessors. The V200.1 series locomotives were intended for use on the Allgäu Railway, the Black Forest Railway, and on the Vogelflug Line between Germany and Denmark. However, a large number of the beautifully designed locomotives, known from 1968 as the 221 series, spent their last service years in the arduous freight traffic of the Ruhr area, until they were taken out of service in 1988.

The completely new PIKO model will delight with numerous realistic details. The cab doors and cab side windows can be opened. The control stand is illuminated. The diesel motors and other equipment in the engine room are visible through the side windows. The roof area features see-through radiator grilles with separate fan blades beneath. Additionally the 37461 model is equipped with a PIKO XP-series sound decoder, offering not only numerous authentic sounds, but also chassis lighting and engine room lighting. This model also includes two fan-driven pulsed smoke generators, reproducing the exhaust of the twin diesel motors. And as a final touch, a third smoke unit replicates the exhaust from the steam generator boiler.

Note on all European locos:

Full sound functions are only available on Digital/DCC operation.
