TRINITY 3281 COVERED HOPPER

LAST CHANCE

The first production run of the Trinity® 3281 Covered Hopper was very well accepted by the modeling community. Therefore, we are moving forward with the second run of this eclectic model as soon as we can. The Last Chance period is extended until May 31, and at that time we will order production of the eleven all new road names. Each new release will feature a minimum of six prototypical road numbers. Each model will exhibit laser sharp decoration, and will be equipped with operating knuckle couplers and precision InterMountain metal wheel sets. The smaller Trinity 3281 cubic foot 2-Bay hopper was introduced in the 1990s based on similar, larger covered hoppers in Trinity Rail catalog. Measuring 41'-11" long, these cars are equipped with round or trough loading hatches and a pair of gravity outlets for commodity off-loading. The Trinity 3281 2-bay covered hopper can be seen traveling in manifest trains, in large cuts, and even in "unit trains" hauling a single commodity.

ACF 2-BAY COVERED HOPPER

ADVANCE RESERVATION

Eight paint schemes of the ACF 2-bay hopper car are offered in both scales for Advance Reservation. Six of the schemes are being done for the first time. Each of these colorful models will feature laser sharp decoration, etched metal roof walk, operating metal knuckle couplers, and precision InterMountain metal wheel sets. Send in your Advance Reservations as soon as you can so we can reach production quantities as quickly as possible and arrange for production. American Car & Foundry continually improved their freight car designs to facilitate delivering greater tonnage per trip for railroads. The Plate "C" 2-Bay CenterFlow would feature a longer draft pocket than either of the previous designs. These cars would become very popular with many railroads and private shippers alike. Carrying many different dense bulk loads from silica to cement products that would require more axles per ton. Production began in 1976 in the ACF St. Louis facilities and 2-Bay CenterFlow variants were built by ARI into the 2000s after ACF was purchased. Many cars can still be seen employed in bulk unit train service to this day.

60' FLAT CAR

ADVANCE RESERVATION

Eight paint schemes of the 60' flat car are being offered for Advance Reservation through June 30. Five of the paint schemes are being produced for the first time. Each model will feature laser sharp decoration, fine detail, operating metal knuckle couplers, and precision InterMountain metal wheel sets. Each release will include six new prototypical road numbers. Flat cars can be employed by many types of service, from lumber to transporting large farm equipment and everything in between. Service can be vast and TrailerTrain offered shippers and railroads many options for getting a load over the railroad. Many railroads have their own fleets of 60' wood deck flat cars being used in Maintenance of Way or even transporting cement segmented bridges for installation somewhere down the line. There are many 60' flat cars still in active service to this day and are a very common fixture in North American railroading.
